

Request for Qualifications to Develop a Restoration Plan for the Cold River, Warren Brook and Bowers Brook

The New Hampshire Department of Environmental Services is seeking qualification statements and expressions of interest from environmental consulting firms to develop a restoration plan for the Cold River, Warren Brook, and Bowers Brook. The development of the restoration plan will include a fluvial geomorphology based assessment, identification and prioritization of areas of concern with emphasis on threats to infrastructure, riparian buffers, and aquatic and floodplain habitat, management recommendations for identified areas of concern, and restoration designs for priority streambank stabilization and/or stream channel, riparian buffer and floodplain restoration locations. The available funding for this work is approximately \$80,000.

Statements should identify personnel and partners or subcontractors, and include experience in preparing watershed based restoration plans, fluvial geomorphology based assessments, streambank stabilization and natural stream channel designs, riparian buffer establishment, floodplain restoration, and description of any previous work performed developing restoration plans. Send six copies of all documents and one PDF version by close of business on May 3, 2006 to Cold River Restoration Plan, c/o Steve Couture, NH Department of Environmental Services, PO Box 95, Concord, NH 03302-0095.
